PortFolio

SUMMARY

Full-Stack Developer with a strong foundation in the MERN stack and background in web application development. Proficient in AWS and ongoing learning in DevOps, with an emphasis on deployment and automation pipelines. Looking to apply technical expertise and expand knowledge in a professional environment.

PROJECTS

Todo application | [Link](#)

- Developed a full stack todo application in **MERN stack**
- In which you can create a todo, update todo, delete todo and fetch all todos from DB
- Deployed the frontend on **Vercel** and backend on **Render**

Authentication System | [Repo](#)

- Developed a full stack Authentication System in **MERN stack**
- In which user can signup and signin on different end points, user will share their name, email and password and it will be saved into database before saving the password the password will be hashed using **Bcrypt.js** library
- After user signup we provide a token the token was generated using **JWT** library (jsonwebtoken) and we save token in browser's localStorage as token
- Not deployed but you can visit my github and checkout the repo

SKILLS

- Frontend Development: HTML, CSS, Tailwind CSS, MaterialUI, ReactJS
